

Packaging Lines

hpl-Neugnadenfelder Maschinenfabrik

Coil packaging lines

In the Packaging Lines product range, hpl-Neugnadenfelder Maschinenfabrik GmbH designs and manufactures strapping and stacking lines as well as handling systems for coils and slit strips. In addition, our product range also includes wrapping machines for rod and ring-shaped products with turntables and conveyors for long goods.

The packaging lines enable significant productivity advantages both for the retrofitting of existing lines and for the commissioning of new lines. Our systems are generally offered both as semi-automatic and as fully-automatic integrated parts of the respective line.

RETROFITTING LEADS TO INCREASED PRODUCTIVITY

Our main focus for the retrofitting of existing slitting lines is on an improved handling of slit strips, creating advantages for our customers in terms of reduced personnel costs for packaging and the avoidance of intermediate storage costs at the slitting line. For us, retrofitting of existing lines is completely independent of the line manufacturer.

In addition to complete systems, we also offer stand-alone machines, such as for example for all kinds of thin, magnetisable slit strips. These machines, designed for the handling of slit strips, are called coil handlers. They solve the problems resulting from the suboptimal winding of slit strips and continuously provide reliable and cost-effective results.

Our experts support you right from the planning phase by providing qualified process analysis and simulation of the relevant logistics and packaging processes. The result is project specifications that meet all site requirements as well as our customers' full product range. This allows us to achieve a highly customised system that represents the optimal solution for our clients. The integration of our packaging lines into new slitting lines is based on

system integration and automation, which are the decisive factors for increased productivity over the entire line.

QUALITY YOU CAN RELY ON

All lines are manufactured fully in accordance with the well-established principles of hpl-Neugnadenfelder Maschinenfabrik:

- Uncomplicated operation and easy handling
- Highest possible automation
- Ease of repair and maintenance
- Short assembly and commissioning times
- Minimal changeover times
- Solid construction

- Long lifetime

Our packaging lines and machines also of course comply with the strict provisions of the EC Machinery Directive.

For all our products we offer a proactive after-sales service throughout the entire lifetime which also includes the supply of required spare parts. Due to its high degree of vertical integration of manufacturing, hpl-Neugnadenfelder is able to guarantee a fast and uncomplicated spare parts supply of key parts and components even decades after a line has been commissioned.

Coil strapping and stacking line for 0.2 – 1.0 mm thick and 20 – 500 mm wide transformer plate strips
